# DINOSAUR MATH

Answer the word problems below. **Remember to show your work!**

*More dinosaur fossils have been found in the United States than in any other country. There could even be some in your backyard!*

1. A dinosaur had seventeen eggs in her nest. Another dinosaur had five eggs. How many eggs did they have together?

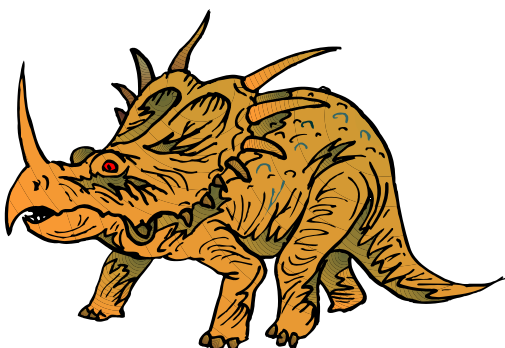

2. There were some dinosaurs gathered around a watering hole. When twelve more dinosaurs arrived, there were thirty-eight dinosaurs. How many were there in the beginning?

3. Brian found eleven dinosaur bones in his backyard. The next day, he found some more, giving him twenty-nine. How many more did he find?

4. Regina found thirty-six dinosaur teeth in her backyard. She gave thirteen to a museum and five to a friend. How many does she have left?

5. A dinosaur had some eggs in a nest. After six eggs hatched, there were still thirty-seven. How many were in the nest in the beginning?

6. Fifty-eight dinosaurs were traveling together across a valley. Some of the dinosaurs split off and made their own group. There were nineteen dinosaurs left. How many dinosaurs were in the new group?

*Did you know that most dinosaurs were vegetarians? That means they only ate plants. Do you eat lots of healthy fruits and vegetables? Which ones are your favorites?*
